During Harvest Season
Slow Down. Be Patient.

During harvest season, farmers will be on the roads moving their equipment between fields and taking grain to market. Every year there are hundreds of crashes on rural roads that involve farm equipment.

Everyone can help prevent these crashes!

Auto drivers can be alert for slow moving farm equipment; pass carefully, only when you’re certain the equipment operator is not about to turn.

Farmers can be visible to other traffic with Slow Moving Vehicle emblems, reflective tape, and adequate lighting.

SMV emblems should be placed pointing up, on the rear center of implement, from 2 to 10 feet above ground.
