Facts about ATV crashes

In the United States...

- About 700 deaths and more than 100,000 emergency department visits occur each year from ATV crashes.
- One in 5 ATV–related deaths and almost 1 in 3 injuries occur among children younger than 16 years. Only 25% of ATV crash victims under 16 years wore a helmet.
- Around 95% of youth deaths and injuries occur on adult-sized ATVs. Females and children are more likely than males and adults to be passenger victims.
- Over half of all ATV deaths occur on roadways.

In Iowa...

- Hundreds of ATV crashes occur each year. Eight out of ten victims are male and 3 out of 10 are passengers.
- Most ATV crashes result in serious injuries requiring emergency treatment. ATV crashes occur in both urban and rural areas.
- Head injury is among the leading causes of death and disability in ATV crashes. Helmet use on ATVs is low.
- Two-thirds or more of on-road crashes are not traffic-related. They involve loss of vehicle control most often resulting in a rollover.

Policies to promote ATV safety

- **All-rider helmet laws** promote helmet use, which when consistently worn can reduce fatal ATV-related brain injuries by around 40% and non-fatal ones by over 60%.
- **Laws related to ATV safety education** require safety training for riders 12-15 years of age (i.e. a safety education certificate) to ride without supervision in ATV parks and on approved trails.
- **Laws restricting the operation ATVs on public roads** limit such use to essential activities, specifically agricultural and other occupational purposes.
- **Laws prohibiting ATV passengers** on ATVs designed for a single rider promote correct and safer use.
- **Laws prohibiting children** under 16 years of age from operating adult-size ATVs could prevent the vast majority of deaths and injuries among youth.

Examples of prevention

- **Programs focused on ATV safety**: the right size ATV, protective gear; no passengers and no roadways, etc.
- **ATV riding environments** (like off-highway vehicle parks) with safety regulations and effective enforcement
- **Engineering approaches** (like ATV seat design) to decrease unsafe riding practices
- **Effective enforcement** of ATV laws to promote safer riding behaviors

Resources & Partners

This template was designed by the University of Iowa Injury Prevention Research Center. Other partners: National Center for Injury Prevention and Control (NCIPC) at the Centers for Disease Control and Prevention (CDC); University of Iowa Stead Family Children’s Hospital.
