Coronary research program adds new information about risk

Risk in children studied in Muscatine

By JOE KONZ

A new research program at the University of Iowa has led to some interesting findings about risk in children.

The goal of the program is to identify factors that increase the risk of heart disease in children.

The program involves collecting data from children, including blood pressure, cholesterol levels, and other cardiovascular risk factors.

The data is then analyzed to identify patterns and correlations that may indicate risk.

So far, the program has identified several factors that increase the risk of heart disease in children, including:

- High blood pressure
- High cholesterol levels
- Family history of heart disease

These findings are important because they can help doctors identify children who are at risk for heart disease and develop strategies to prevent it.

The program is ongoing, and the researchers are continuing to collect data and analyze it.

They hope to identify more factors that contribute to heart disease in children and develop more effective prevention strategies.

In the meantime, they urge parents to keep an eye on their children's health and encourage healthy habits from a young age.

Testing blood pressure

Children have been taking blood pressure readings in school as part of a new study.

The aim is to identify children who are at risk for high blood pressure and potentially heart disease.

The children are being measured twice a month, and the results are being recorded.

The data will be analyzed to identify patterns and correlations that may indicate risk.

This information will be used to develop strategies to prevent high blood pressure and heart disease in children.

The study is ongoing, and the researchers are continuing to collect data and analyze it.

They hope to identify more factors that contribute to high blood pressure and heart disease and develop more effective prevention strategies.

In the meantime, they urge parents to keep an eye on their children's health and encourage healthy habits from a young age.

More turkeys available this year

AMSUS (AP) — The Pilgrims Fellers had a tough time getting turkeys as they prepared to cook the Thanksgiving turkey on Thursday, but the news was much different on Friday.

This year, turkeys on the market were available at lower prices.

The good news for the chicken meat industry is that turkey farmers are receiving the best price for their birds in years.

The reason for this is that the price of turkeys is much lower than the price of chickens.

The turkeys are much easier to raise than chickens, so the farmers are making more money on each bird.

The turkeys are also much less expensive to raise than chickens, so the farmers are saving money on feed and other expenses.

The turkeys are also much more popular than chickens, so the farmers are selling more birds.

The turkeys are also much easier to raise than chickens, so the farmers are making more money on each bird.
