Iowa Health and Wellness Plan (IHAWP) Evaluation

This project will evaluate two programs in the Iowa Health and Wellness Plan (IHAWP). On January 1, 2014 Iowa implemented the Iowa Health and Wellness Plan (IHAWP), an 1115 Medicaid demonstration. IHAWP replaces the IowaCare program with plans that offer more covered services and a broader provider network, and expanded coverage to other eligible low-income adults in Iowa who were not previously enrolled in IowaCare through two new programs: the Marketplace Choice and the Wellness Plan

Investigating the Effects of Mandating Pediatric Oral Health Services as Essential Health Benefits
As part of recent national health insurance reforms, pediatric dental benefits must be included in private marketplace insurance plans for children 18 and under and oral health exams must be included at no cost to patients age 10 and under. This study will evaluate the effects of these mandates on take-up of dental coverage and use of dental care among children.

Insurance Coverage Effects on Access to Mental Health Services and Outcomes

This study will investigate how removing a significant barrier to health care, lack of health insurance, affects mental health outcomes for the populations targeted by recent public and commercial insurance expansions. The proposed research will also gain insight into how obtaining health insurance affects mental health, including changes in access to services and potential changes in household spending.

National Expansion of Dental Insurance Among Young Adults: A Natural Experiment

This study will evaluate the effects of a national expansion of private dental insurance among young adults on utilization of preventive and curative dental services as well as effects on dental spending. The study will also assess how other factors modify this impact in order to provide a comprehensive analysis that may serve as groundwork to inform future policies affecting dental insurance.

Mild hypothermia triples the risk of surgical site infection, quadruples the risk of morbid cardiac events, and increases blood loss. The objective in this study is to evaluate the effect of the Prevention of Perioperative Hypothermia (PPH) Safety Toolkit on adherence to safe practices for prevention of perioperative hypothermia and selected outcomes (e.g. rates of hypothermia, cost).	09/30/2013 – 09/29/2016 \$346,041
