

Job Title: Principal Statistician

At Pharmavite, we strive to make the world a better place. It's in our DNA.

More than 45 years ago, our founders focused on improving health & wellness by going back to the basics--good nutrition and essential nutrients & minerals. Since that day, we've been a leader in the health and wellness industry and have earned the trust of consumers, healthcare professionals, and retailers by offering the highest quality vitamins and supplements under the **Nature Made®** brand.

At Pharmavite, we make products with a purpose, and our purpose is **Bringing the Gift of Health to Life**. We are always seeking like-minded, talented people who are passionate about health and wellness to join our team. We believe that if we work hard, and care about what we do, we will deliver exceptional results together.

In this role, the **Principal Statistician** will provides senior-level oversight of statistical aspects in the design of clinical trials and statistical analysis of analytical and clinical trial results. Collaborates with the Science & Technology, Analytical Research Services, Regulatory Affairs, and Quality organizations to provide in-depth expertise in the statistical evaluation, modeling, and publication of clinical study reports, analysis of stability studies, among other things.

The ideal candidate will possess the following:

- Masters in statistics, biostatistics, or related field; PhD strongly preferred
- Master's degree plus a minimum of 12 years of experience in data analysis and/or statistician experience. Alternatively, a PhD degree plus a minimum of 6 years of experience in data analysis and/or statistician experience.
- Proven experience performing complex statistical programming and statistical analysis and systems programming.
- Strong SAS programming skills (Proficient in BASE, STAT, MACRO and GRAPH).
- Demonstrated proficiency in using Microsoft Excel, SAS and/or STATA (statistical software), which includes data access, data retrieval, data management, data analysis, and data presentation.
- Experience with a wide variety of clinical trials/designs and corresponding reporting of data, and large-scale multivariate longitudinal databases.
- Experience in interpreting the results of statistical analyses from complex data sets.
- Proven management skills, as shown through management of multiple projects and/or staff members.
- Ability to work independently with minimal supervision and coordinate activities with competing deadlines.
- Great attention to detail, strong analytical skills, ability to prioritize multiple tasks and ability to deliver reports in timely manner.
- Strong organizational and analytical problem-solving skills.
- Good organizational skills with the ability to adapt and adjust to changing priorities.
- Skills to communicate complex information in a clear and concise manner verbally and written.
- Research skills at a level to evaluate alternate solutions and develop recommendations.
- Ability to direct and promote teamwork in a multi-disciplinary team setting.
- Ability to review current processes and identify potential process improvements.

We are proud to offer:

- Salary competitive with a bonus program
- Exceptional benefits package which includes medical, dental vision
- 401K with company matching
- Educational assistance
- Substantial discounts on our products
- Life insurance and long-term disability coverage
- 11 paid holidays per year
- An opportunity to be a part of a health/wellness organization
- Credit union membership
