

## COLLEGE OF PUBLIC HEALTH CURRICULUM VITAE

**Jeffrey D. Dawson**

June 20, 2022

### I. EDUCATION AND PROFESSIONAL HISTORY

#### A. Education

<u>Institution</u>	<u>Field of Study</u>	<u>Degree Obtained</u>	<u>Degree Date</u>
Brigham Young University, Provo, Utah	Statistics	BS	1987
Harvard School of Public Health, Boston, Massachusetts	Biostatistics	ScD	1991

#### B. Professional and Academic Positions

<u>Position Title</u>	<u>Dates of Service</u>	<u>Location/Institution</u>
Teaching Assistant	1987-1991	Harvard University, Boston
Summer Trainee	1988	Dana-Farber Cancer Institute, Boston
Research Assistant	1989-1990	Harvard University, Boston
Assistant Professor	1991-1997	Department of Preventive Medicine and Environmental Health (Division of Biostatistics), Carver College of Medicine, The University of Iowa, Iowa City
Associate Professor	1997-1999	Department of Preventive Medicine and Environmental Health (Division of Biostatistics), Carver College of Medicine, The University of Iowa, Iowa City
Associate Professor	1999-2009	Department of Biostatistics, College of Public Health, The University of Iowa, Iowa City
Visiting Professor	2000-2001	Brigham Young University, Provo
Director of Graduate Studies	2003-2012	Department of Biostatistics, College of Public Health, The University of Iowa, Iowa City

<u>Position Title</u>	<u>Dates of Service</u>	<u>Location/Institution</u>
Professor	2009-Present	Department of Biostatistics, College of Public Health, The University of Iowa, Iowa City
Associate Dean for Faculty Affairs	2011-Present	College of Public Health, The University of Iowa, Iowa City

**C. Honors, Awards, Recognitions, and Outstanding Achievements**

<u>Year</u>	<u>Title</u>
1987	Elected Member, Phi Kappa Phi Honor Society
1992	National Science Foundation travel award
1994	Elected University of Iowa Faculty Senate Member
1997	Co-author of Best Research Paper (Honorable Mention), selected by the Society of Teachers of Family Medicine
1997	Co-author of Best Research Paper at Society of Gynecological Oncology Annual Meeting
1997	Co-author of paper receiving Award for Clinical Biomechanics Research, the American Society of Biomechanics
1999	Appointed as Faculty Mentor for Medical Science Training Program
2004	College of Public Health Faculty Service Award, College of Public Health, The University of Iowa
2008	Elected Chair of College of Public Health Faculty Council
2013-2015	ASA Council of Chapters Governing Board (District 4 Vice Chair)
2013-2014	Academic Leadership Program Fellow, Committee on Institutional Cooperation
2013	Inducted into Delta Omega Honorary Society in Public Health
2016	Inducted as Fellow of the American Statistical Association, American Statistical Association
2021-2023	Chair of ASA Council of Chapters Governing Board
2022-Present	Statistical Consultant for African Institute for Professional Development, ASA Statistics Without Borders

## II. TEACHING

### A. Teaching Assignments on a semester-by-semester basis (*classroom, seminar, teaching lab*)

*Colorectal cancer (CRC) is the third most common cancer and the third leading cause of cancer death in both men and women in the U.S., with nearly 50,000 deaths each year. Fecal immunochemical tests (FITs) are a type of FOBT that can be a sensitive, specific, and low-cost alternative to colonoscopy for CRC screening. We propose to compare the test characteristics of three CLIA-waived FITs and two automated FITs, using colonoscopy as the gold standard. Our aims are: Aim 1: To assess the diagnostic accuracy for advanced colorectal neoplasms of three of the most commonly used CLIA-waived FITs and two automated FITs, using colonoscopy as the gold standard. Aim 2: To evaluate the diagnostic accuracy of two quantitative FITs using receiver operating characteristic (ROC) analysis. Aim 3: To assess factors associated with false positive and false negative FIT results for each device. These findings will provide essential information about FITs with the best test characteristics for future expanded use of FIT, critically important to achieving our long-term goal of reducing morbidity and mortality from CRC. FITs are more acceptable to patients, will allow higher screening rates, and will reduce costs as compared with a screening strategy based on colonoscopy as the primary initial screening method.*

*Project Summary: Our objective in this application is to fill the translational gap by determining the biological, clinical, and functional effects of long term aerobic exercise (LTAE) in PD. Our overall hypothesis is that LTAE improves brain tissue integrity and slows down PD. Our FIRST AIM is to determine the effects of LTAE on clinical features and functional abilities in PD. Our prior 6-month, uncontrolled trial showed preliminary evidence that aerobic exercise improves aspects of motor function, cognition, and QoL in PD, but long term outcomes and implication for functional abilities are unknown. We hypothesize that LTAE will provide sustained improvement in motor function, cognition, and non- motor symptoms with translation of benefits to QoL and IADL. We will test this with a one-year randomized controlled trial (RCT) that compares the effects of moderate aerobic exercise vs usual care. We will use driving as the outcome for IADL. Driving represents an important symbol for independence, and depends on integrity of cognitive and motor systems. Our SECOND AIM is to determine the mechanism of LTAE effects in PD. CRF reflects complex improvements in vascular, cardiac, and metabolic health from aerobic exercise. There is preliminary evidence that higher CRF is associated with better brain health and motor/cognitive function, and that aerobic exercise improves these outcomes. For example, our preliminary study showed*

*improvement of microtissue integrity in the striatum and white matter on DTI, but it is unclear how these changes counteract PD progression over long term. Our hypotheses are: 1) LTAE will improve brain tissue integrity as indexed by DTI, 2) LTAE effects on motor and cognitive function are mediated by changes in brain tissue integrity on DTI, and 3) physiological processes leading to improved CRF from AE are critical to the benefits on the brain tissue integrity and motor/cognitive function.*

*This project tackles the NIA's 2019 grand challenge of using a person's own vehicle as a passive-detection system for flagging potential age- and/or disease-related aberrant driving that may signal early warning signs of functional decline and incipient Alzheimer's disease (AD), even before standard clinical tests. Aim 1: Extract key real-world driver behavior features over a 3-month continuous, baseline period that classify normally aging, MCI, and ACS drivers by NIA-AA core clinical criteria. Aim 2: Determine the extent to which real-world driver sleep and mobility factors, collected over a continuous, 3-month baseline period, mediate the relationship between extracted driver behavior and clinical features (described in Aim 1). Develop models (statistical and supervised machine learning) that combine extracted features of driver behavior (from Aim 1) and real-world sleep and mobility (SA2) to detect early signs of MCI and AD and predict disease progression.*
