<p><i>Brief description of project goals: Our overarching goal is to accelerate integration of research into clinical partnerships around the state and, through team science, bringing our basic, translational and clinical research workforce together to escalate the pace and breadth of scientific discovery to impact healthcare for the state and beyond. Iowa is a rural state, which brings special health care needs and challenges. The ICTS is engaging with other CTSA hubs and national clinical and translational research systems to empirically test different approaches and to develop the evidence base of proven strategies for accelerating translation that can be more broadly disseminated. Though distance and rurality drive our approaches, the strategies that we develop are simply new and potentially better ways to generate broad representation and improved participation by patients, healthcare teams and academicians.</i></p>

---	-----	---------------------------

Brief description of project goals: *All children experience acute pain at times throughout their lives, and unfortunately, hospitalized children often have procedures performed without adequate pain management, causing short and long-term harm to children. The HEAL KIDS Pain Program aims to coordinate large, multi-center, multi-disciplinary clinical trials to improve pediatric acute pain management. This application describes a collaborative effort to form a qualified and experienced Resource and Data Center to facilitate the harmonized collection of clinical trial data, develop pediatric common data elements, and curate and share data from these pediatric acute pain clinical trials.*
